

Open Positions 2021-01-27

Astrego is developing a system for diagnosing and testing patients with Urinary Tract Infections(UTI) to aid doctors in prescribing appropriate antibiotics, and help in the global challenge of antibiotic resistance.

We are actively looking for experienced and talented professionals to join our team, and specifically candidates for the positions below – feel free to contact us at work@astrego.se if you're interested in joining our multidisciplinary team.

Software Team Leader

- You will be responsible for leading a multidisciplinary team of SW engineers developing and testing firmware and application software for Astrego's analyzer for rapid Antibiotic Susceptibility Testing(AST).
- You have 10+ years relevant industrial experience.

Senior Mechanical Engineer

- You will be part of the engineering team with working with the mechanical design of Astrego's analyzer for Antibiotic Susceptibility Testing(AST) in close cooperation with electrical and software engineers. You will also contribute to development of processes and equipment for manufacturing the company's single-use test cartridges.
- You have 10+ years relevant industrial experience.

Verification/Validation or QC Engineer

- You will be part of the engineering team with responsibility for verification and validation testing of Astrego's in vitro diagnostic analyzer.
- You have 5-10 years relevant industrial experience.

Clinical microbiology lab technician/BMA

- You will be part of the Assay R&D team with responsibility for daily activities in a clinical microbiology lab, for example, culturing bacteria, routine MIC-determination with several methods & documentation of results.
- You are a BMA or equivalent and have 5+ years relevant experience.
